Re: Mill Site Claims at Aragonite, Utah – Revision of Letter of August 7, 2002

Dear Mr. Munson:

After our recent inspection of subject property, Broken Arrow Incorporated has decided to dismantle the steel building closest to the track. This will be completed by January 1, 2003. After dismantling the building, we will then consider the integrity of the cement slab the building rests upon. We may keep this slab for storage of intermodal containers or as a loading dock for trucks. If we decide not to use the pad it will be demolished and hauled to an appropriate location.

We would like to retain the Quonset type building north and east of the steel building. We anticipate a need for a storage building and it is relatively easy to re-skin this building.

At the time of clean up of the steel building, we will clean up the small amount of trash remaining at the site. If you have any questions, please call.

Thanks for all your help.

Yours very truly,

Sidney K. Hullinger
Senior Vice President
